-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 5 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Winder 5,489,047. Winder discloses a universal collar that is attached to a container 16 that includes a fluid pump as is the pressurized propellant within the container and is capable of being used with a keyed dispensing system as claimed (note that the keyed dispensing system is not part of the claimed combination, only the collar), with the universal collar including a body 24 with an axial bore surrounding the centerline in figure 6, a first flange 52, a second flange 58, with a keyless portion between the flanges to which is secured container portion 34 that is capable of bypassing a keyed system as claimed, and a recess 46 that receives projection 48 on the upper portion of the container assembly with the recess being located in an axially extending top edge 44 (claim 7) and notches in between the flange portions 58 as shown in figure 6 and the other element 46 in flange 52 (one element 46 being the recess as claimed and the other 46 being the notch). Note that as claimed, there is no structural difference between the notches and the recess.
3. Claims 2 and 5-7 are rejected under 35 U.S.C. 102(b) as being anticipated by UK 2,088,837. UK discloses a universal collar that is attached to a container 14 used in a dispenser 17 that includes a gravity based fluid pump 26 within the dispenser and is capable of being used with a keyed dispensing system as claimed (note that the keyed dispensing system is not part of the claimed combination, only the collar), with the universal collar including a body as is the assembly shown in the embodiment of figures

1 and 2 or figures 3-5 with an axial bore surrounding the centerline in figures 1 and 3, a first flange 15 or 46, a second flange 11 or 52/54, with a keyless portion between the flanges as claimed that is capable of bypassing a keyed system as claimed, a rib that is forwardly located with respect to the flanges such as the filled in portions between grooves 23 in figure 1 or 64 in figure 3 which ribs will be vertically oriented when the dispenser is in a storage position with the outlet at 30 or 76 facing up, and a recess (Claims 5-7) in flanges 52/54 in figure 3 that mates with projection 56 on the dispenser wherein the collar of UK includes notches as are 23 or 25 in figure 1 which are opposite the ribs extending between the notches 23, 25, or 78 and 62 in figure 3.

4. Applicant's arguments filed 9/23/2009 have been fully considered but they are not persuasive. Applicant contends that the references do not disclose notches, however, Winder discloses notches between the spaced flanges 58 and one of the elements 46 and UK discloses notches 23, 25, 78 and 62.
